

YOSSEF BENAMU

Developers and Traders

PERSONAL DETAILS

Modiin

yossef.benamu@gmail.com, +972547898883

PROFILE

Finance and technology-oriented professional with a strong self-taught background in **blockchain, trading, and software development**. Active in financial and crypto markets since 2019, with hands-on experience in **market analysis, risk management, and on-chain data monitoring**. Currently pursuing **full-stack development studies** focused on bridging **finance, data, and technology** to build efficient real-world solutions.

EDUCATION

Blockchain

Dec 2019 - Present

Self-Taught Education

Independent and continuous learning in blockchain technologies, covering foundational concepts and advanced mechanisms, including distributed ledgers, consensus models, smart contracts, crypto-assets, and decentralized finance (DeFi).

Built a strong conceptual and practical understanding through long-term research, experimentation, and market exposure.

Finance & Trading Studies

Oct 2023 - Aug 2025

Daniel Damari

Comprehensive training in financial markets and trading, with a strong focus on both theoretical foundations and practical application.

Developed a structured understanding of market mechanics, asset classes, and capital management across traditional and digital markets.

Key areas of study included:

Financial market structure and price behavior

Technical analysis and market psychology

Risk management and capital allocation

Trading strategies and execution logic

Macro and microeconomic influences on markets

Applied analysis on equities, indices, forex, and crypto-assets

Training emphasized discipline, consistency, and decision-making under uncertainty, with continuous application through market observation, simulations, and real-market exposure.

Self-Taught Technical

Dec 2021 - Present

Self-Taught Education

Independently learned and applied Python, Node.js, and JavaScript alongside finance studies, with a strong focus on building practical and functional software tools.

Developed multiple custom software projects, including:

Blockchain Wallet Tracking Tool (Python):

Built a program capable of tracing and monitoring a selected wallet, analyzing transaction flows and activity patterns.

Bitcoin Transaction Tracker (Python):

Designed a real-time monitoring tool for the Bitcoin blockchain, classifying transactions by size to distinguish between large and small transfers and highlight significant on-chain activity.

Discord Bot for Community & Project Management (Node.js & JavaScript):

Developed a Discord bot during an NFT-related project to automate interactions, manage user activity, and support community operations within the platform.

Projects focused on automation, real-time data handling, system logic, and practical problem-solving, combining technical execution with structured thinking.

Education | Full-Stack Development

Sep 2025 - Present

HackerU

Currently pursuing full-stack development studies, focused on building strong foundations in web technologies, programming logic, and application architecture.

The program emphasizes both front-end and back-end development, with practical projects designed to translate technical concepts into functional, real-world applications.

This training complements prior experience in finance and blockchain by strengthening the ability to design, develop, and structure complete digital systems, bridging analytical thinking with technical execution.

SKILLS

- Financial Markets & Trading Analysis
- Risk Management & Capital Allocation
- Blockchain Fundamentals & On-Chain Analys
- Python Programming
- JavaScript & Node.js Development
- Full-Stack Development
- Real-Time Data Monitoring & Analysis
- Software & Tool Development
- Analytical & Systems Thinking
- Bridging Finance, Blockchain & Technology
- Self-Taught & Independent Learning
